

Now that you've marked your UID part...

- How will you register UIDs with the UID Registry?
- How will you integrate UID with your DD250 Receiving Report?
- How will you generate labels and RFID tags for your UID packages?
- How will you include UID on your Advance Shipment Notice?

**Mil-Pac Technology** offers out-of-the box solutions to quickly and efficiently satisfy all of the DoD's mandates - UID, WAWF and RFID.

- Simple submittal of UID data with WAWF DD250 Receiving Reports and Invoices
- Electronic submission to DOD UID Registry for non-WAWF transactions
- Submittal of embedded UID items using AIA-compliant Partners to Primes transactions
- Automatic generation of UID barcode labels compliant with Mil-Std-130M
- Warehousing of UID data to allow retrieval of shipment information for every UID
- RFID-tagging of unit containers for UID-marked items
- Submittal of UID and RFID data via Advance Shipment Notice (ASN) transactions
- Warehousing of RFID data to allow retrieval of shipment information for every RFID
- Direct electronic submission of UIDs to UID Registry for non-WAWF transactions

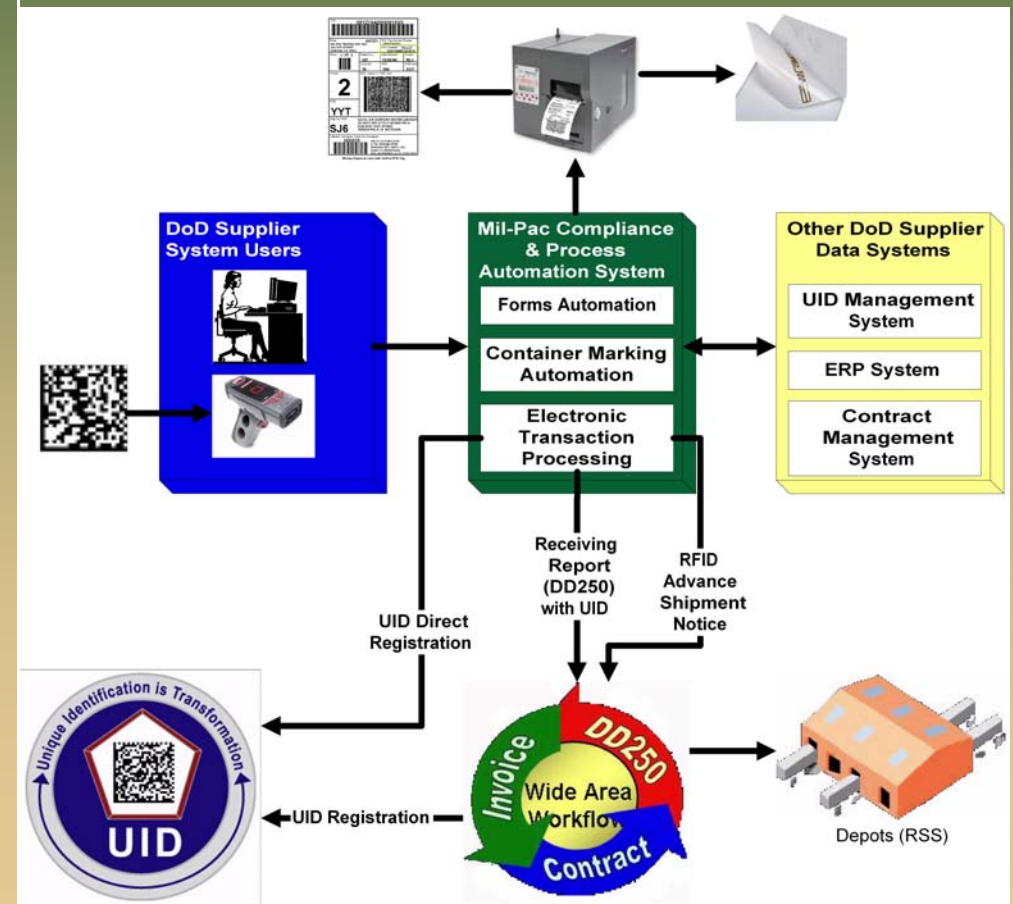

Mil-Pac software is relied on for the marking, packaging, acceptance and invoicing of millions of dollars of defense contract deliverables every month. Mil-Pac is leading the way making off-the-shelf WAWF-enabled applications available to defense contractors. Mil-Pac is dedicated to understanding and meeting the needs of the defense contractor and is committed to total customer support.

## Mil-Pac Technology UID-enabled software consists of three key *integrated* components:

- **Forms Automation**—This software automates the preparation of WAWF DD250 Receiving Reports and Invoices and forms such as the DD1149, DD1348, SF1034, SF1443 and FAA8130 and dozens more. On-screen data entry helpers and data lookups make data entry simple and quick.
- **Container Marking Automation**—This software automates the preparation and printing of over 60 different label and tag formats, including the Military Shipment Label, Exterior Container Label, Unit Container Label, RFID tags and many more; every container marking needed by DoD suppliers. Integrated use of *Forms Automation* data eliminates redundant data entry.
- **Electronic Transaction Processing**—This Mil-Pac Technology software and service enables the automatic submission of many electronic transactions, including WAWF Receiving Reports, Invoices, Combos, Performance-Based Logistics (PBL), Vendor-Managed Inventory (VMI), and many others.

Integration with other systems reduces data entry efforts and errors:

- **UID Management Systems**-UID Pedigree
- **ERP Systems / Contract Management Systems**-Contract data

**About Mil-Pac Technology:** Mil-Pac Technology has been developing software for the very specialized requirements of defense contract packaging and shipping since its inception in 1982. It continues to develop and refine products that automate DD-Form processing, barcode label generation and support advanced electronic data interchange (EDI) applications for a variety of defense initiatives. Mil-Pac's integrated solutions for Wide-Area Workflow (WAWF), Radio Frequency Identification (RFID) and Unique Identifiers (UID) lead the industry for their ease of use and their impact on productivity.

Mil-Pac Technology offers a number of powerful, flexible software solutions currently in use by a wide range of defense companies from the very largest prime contractors to the very smallest subcontractors on which the defense industry depends.
